# Overview

- digital imaging
- road safety
- AusRAP
- challenges
- other stuff

# Acknowledgements

- Australian Automobile Association
- Joseph Affum
- Rob McInerney
- Greg Smith

# Automated data collection

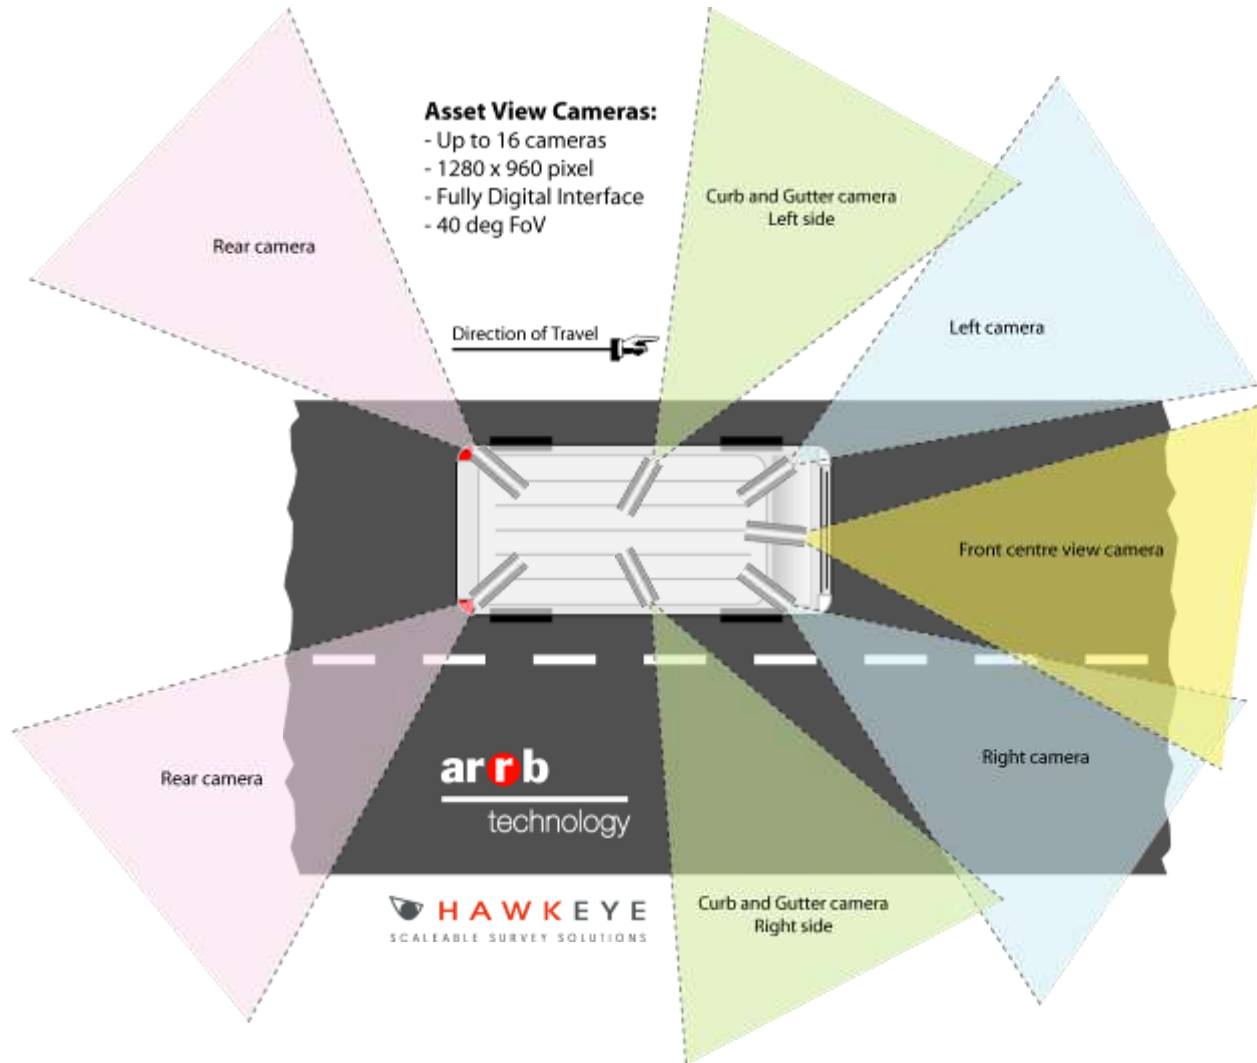

# Pavement view camera

 **HAWKEYE**  
SCALEABLE SURVEY SOLUTIONS

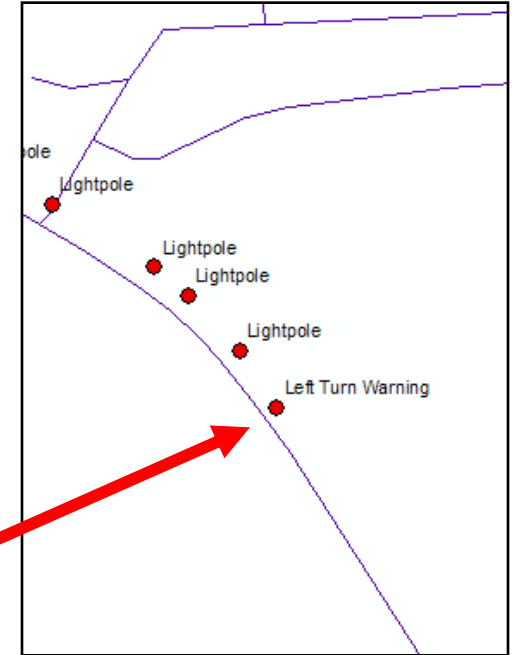

# Digital imaging systems

# What are images usually used for?

- pavement condition
- asset management (identification)

## Other applications .....

- roadside vegetation
- project and maintenance planning
- quality control
- risk assessment
- road safety

# The world road safety problem

- 1.2 million killed every year
- 50 million seriously injured

# How safe are our roads?

Australia:

- > 1,600 deaths
- > 22,000 seriously injured

USA (2007):

- > 41,500 deaths

# How safe are our roads?

- public perception varies greatly
- is the safety of a road just about potholes?

## Time and unforeseen occurrence...

# National Strategy

Deaths per 100,000 population

Source: AAA analysis of Australian Transport Safety Bureau and Australia Bureau of Statistics data

# How to save lives

Here's how the National Road Safety Strategy says we could save 700 lives every year

Improved Roads

Safer Vehicles

Driver Behaviour

New Technology

# A safe road system

Safer drivers in safer cars on safer roads

# AusRAP background

- AusRAP – Australian road assessment program
- sister program to ANCAP (Australian new car assessment program)
- based on EuroRAP
  - risk mapping of casualty crashes
  - road protection score based on engineering features (star ratings)

# Risk Maps

(casualty crashes per km, 2000-04)

## How does AusRAP star rate roads?

- star-ratings measure the safety that is *built-in* to the road
- they enable sections of road that are likely to be risky to be identified before a crash occurs
  - in NZ in 2004, 54% of fatal crashes occurred where there had been no other injury crashes in the previous 4 years
- measures *likelihood* and *severity*
- method developed with ARRB Consulting

## Road protection score (RPS)

- focuses on 3 main crash types
  - run-off road
  - head-on
  - intersection related crash problems
- limited to rural open road sections  $> 90$  km/h
- risk as it relates to the individual – no exposure

# What elements are assessed?

For run-off road and head-on crashes:

- road type: divided or undivided
- lane width
- sealed shoulder width
- horizontal alignment
- terrain
- delineation
- roadsides
- traffic speeds
- overtaking provision

# What elements are assessed?

For intersection crashes:

- intersection type
- volume of traffic on side road (or railway)
- traffic speeds
- alignment of side roads (or railway)
- sight distances
- right and left turn provision

## Road protection score (RPS)

- star-ratings are based on a RPS
- a risk 'score' is assigned to each of the road's design elements that influence safety
- e.g. the risk on road with narrow lanes (<2.8m) is 1.5 [50% higher than wide lanes (3.6m)]
- RPS combines these scores to form a star-rating

Lane width	Risk score
>3.6	1
3.2-2.6	1.04
2.8-3.2	1.15
<2.8	1.5

- 
- The screenshot displays the 3D Roadview software interface. The top menu bar includes File, View, Tools, Window, and Help. The left sidebar contains modules: Geometry, GPS, Profile, Video, and Reports. The main view shows a 3D perspective of a road project with a red shoulder, a yellow diamond-shaped warning sign, and a blue sky. A smaller inset window shows a 2D profile view of the road. The bottom section features an Information Area and a Data Table.
- Information Area:**
- | Camera         |
|----------------|
| PROJECT CENTER |
- Data Table:**
- | Frame | Distance (ft) | GPS - Lat (Deg) | GPS - Lon (Deg) | GPS - Alt (ft) |
|-------|---------------|-----------------|-----------------|----------------|
| 044   | 12,777        | No data         | No data         | No data        |
- Data Table (Project Details):**
- | Item # | Description                   | Chainage (ft) |
|--------|-------------------------------|---------------|
| 0      | Start                         | 0.000         |
| 1      | Start Divided Hwy             | 0.000         |
| 2      | Flowover Rd                   | 0.205         |
| 3      | 5111 Veterans Blvd Central Rd | 0.000         |
| 4      | Hopkinton Rd                  | 2.119         |
| 5      | Kang St                       | 3.962         |
| 6      | 2010 Hopkins Hwy              | 3.995         |
| 7      | Foster St                     | 4.500         |
| 8      | Gleason Rd                    | 6.174         |
| 9      | Home Rd                       | 8.029         |
| 10     | Shawville Rd                  | 9.642         |
| 11     | Edgemoor Rd                   | 12.205        |
| 12     | End Divided Hwy               | 12.825        |
| 13     | Stop                          | 12.825        |

## Star rating bands

Rating Scale	RPS	Typical Features
<b>5 star</b> * * * * *	<b>0 to 1.05</b>	A divided straight road with good delineation, wide lanes and sealed shoulders, favourable roadside conditions and grade separated intersections. No undivided roads can achieve a 5-star rating
<b>4 star</b> * * * *	<b>&gt;1.05 to 4</b>	A divided road with minor deficiencies in some road features OR An undivided straight road with good engineering & roadside conditions
<b>3 star</b> * * *	<b>&gt;4 to 10</b>	A divided road with major deficiencies in some road features and at-grade intersections at regular intervals OR An undivided road with minor deficiencies in some road features
<b>2 star</b> * *	<b>&gt;10 to 25</b>	A divided road that has with many major deficiencies and regular at-grade intersections An undivided road that has major deficiencies in some road features and/or a high frequency of intersections
<b>1 star</b> *	<b>&gt;25</b>	A divided road in mountainous terrain that has poor features and roadside conditions and more than three 4-leg at-grade major intersections per 5km length. An undivided road in mountainous terrain that has very poor features.

# Bruce Highway, QLD

Severe roadside

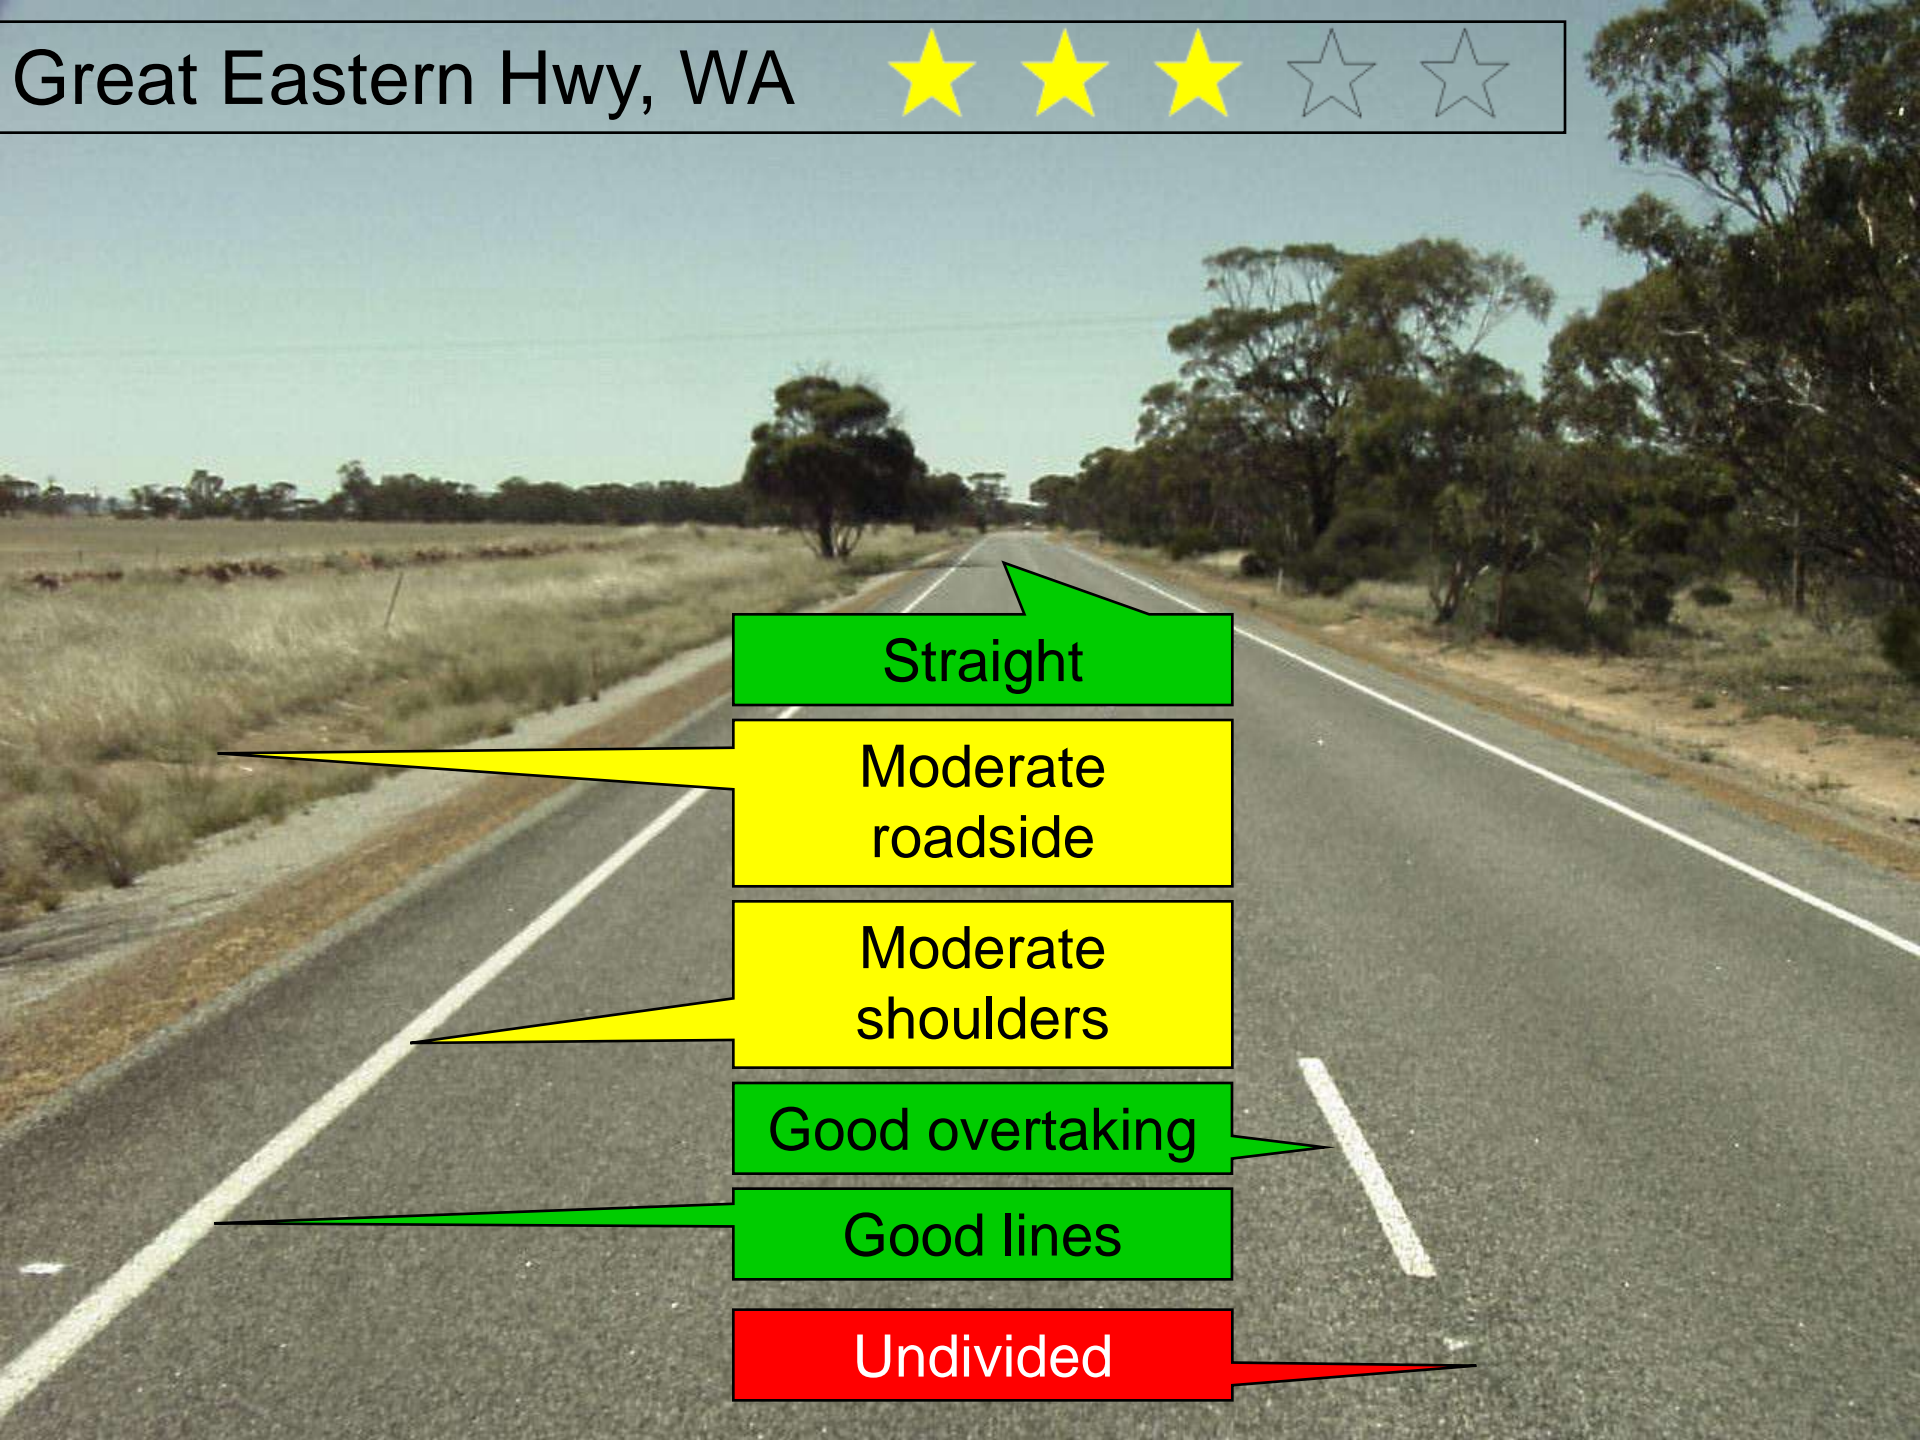

Narrow shoulders

Bad overtaking

Curves

Undivided

# Great Eastern Hwy, WA

Straight

Moderate  
roadside

Moderate  
shoulders

Good overtaking

Good lines

Good overtaking

Good lines

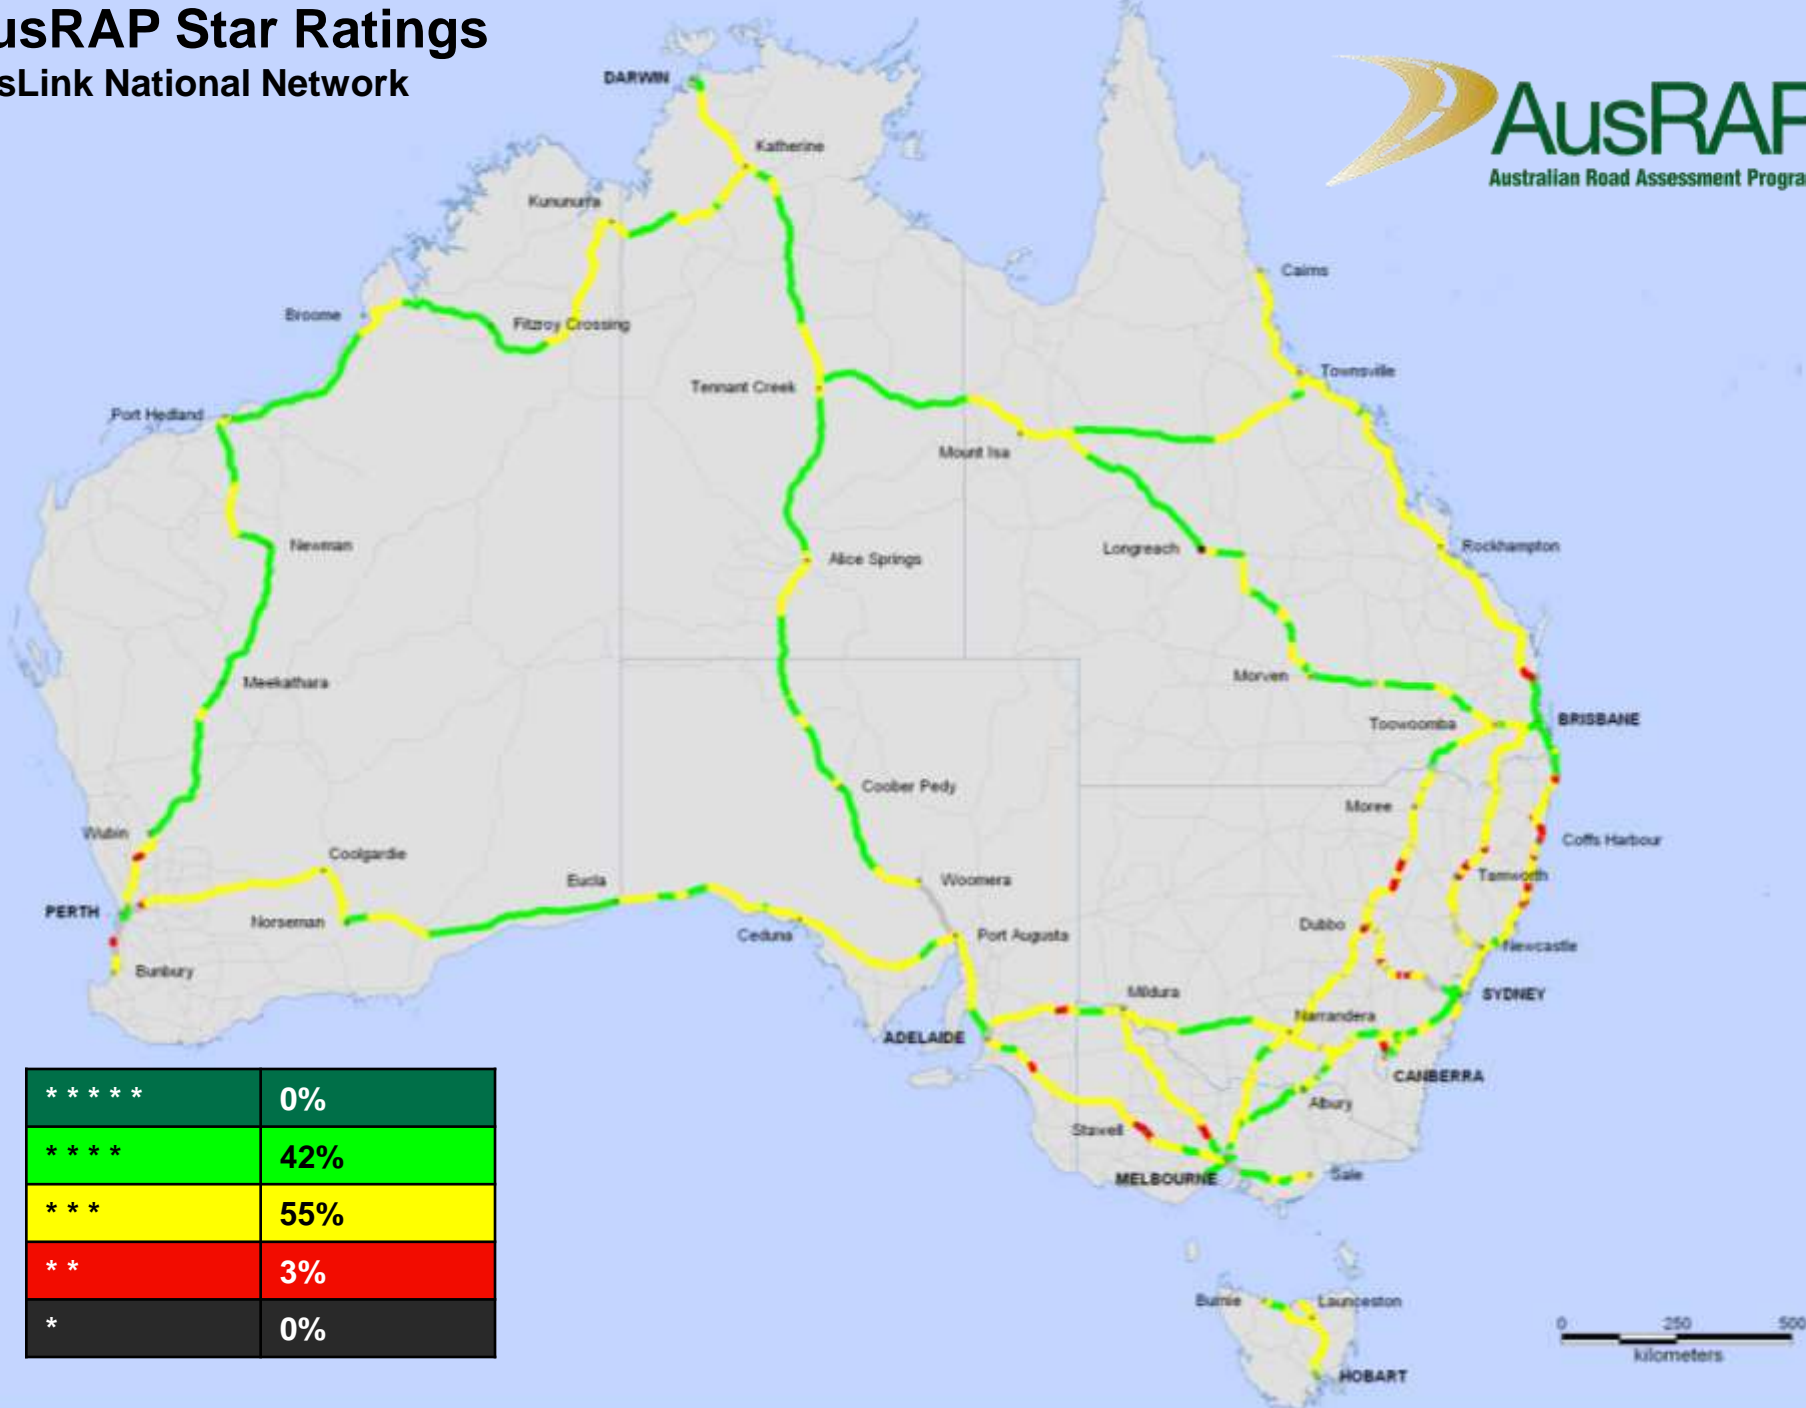

Wide shoulders

Wide lanes

Divided – innovative use of barriers

# AusRAP Star Ratings

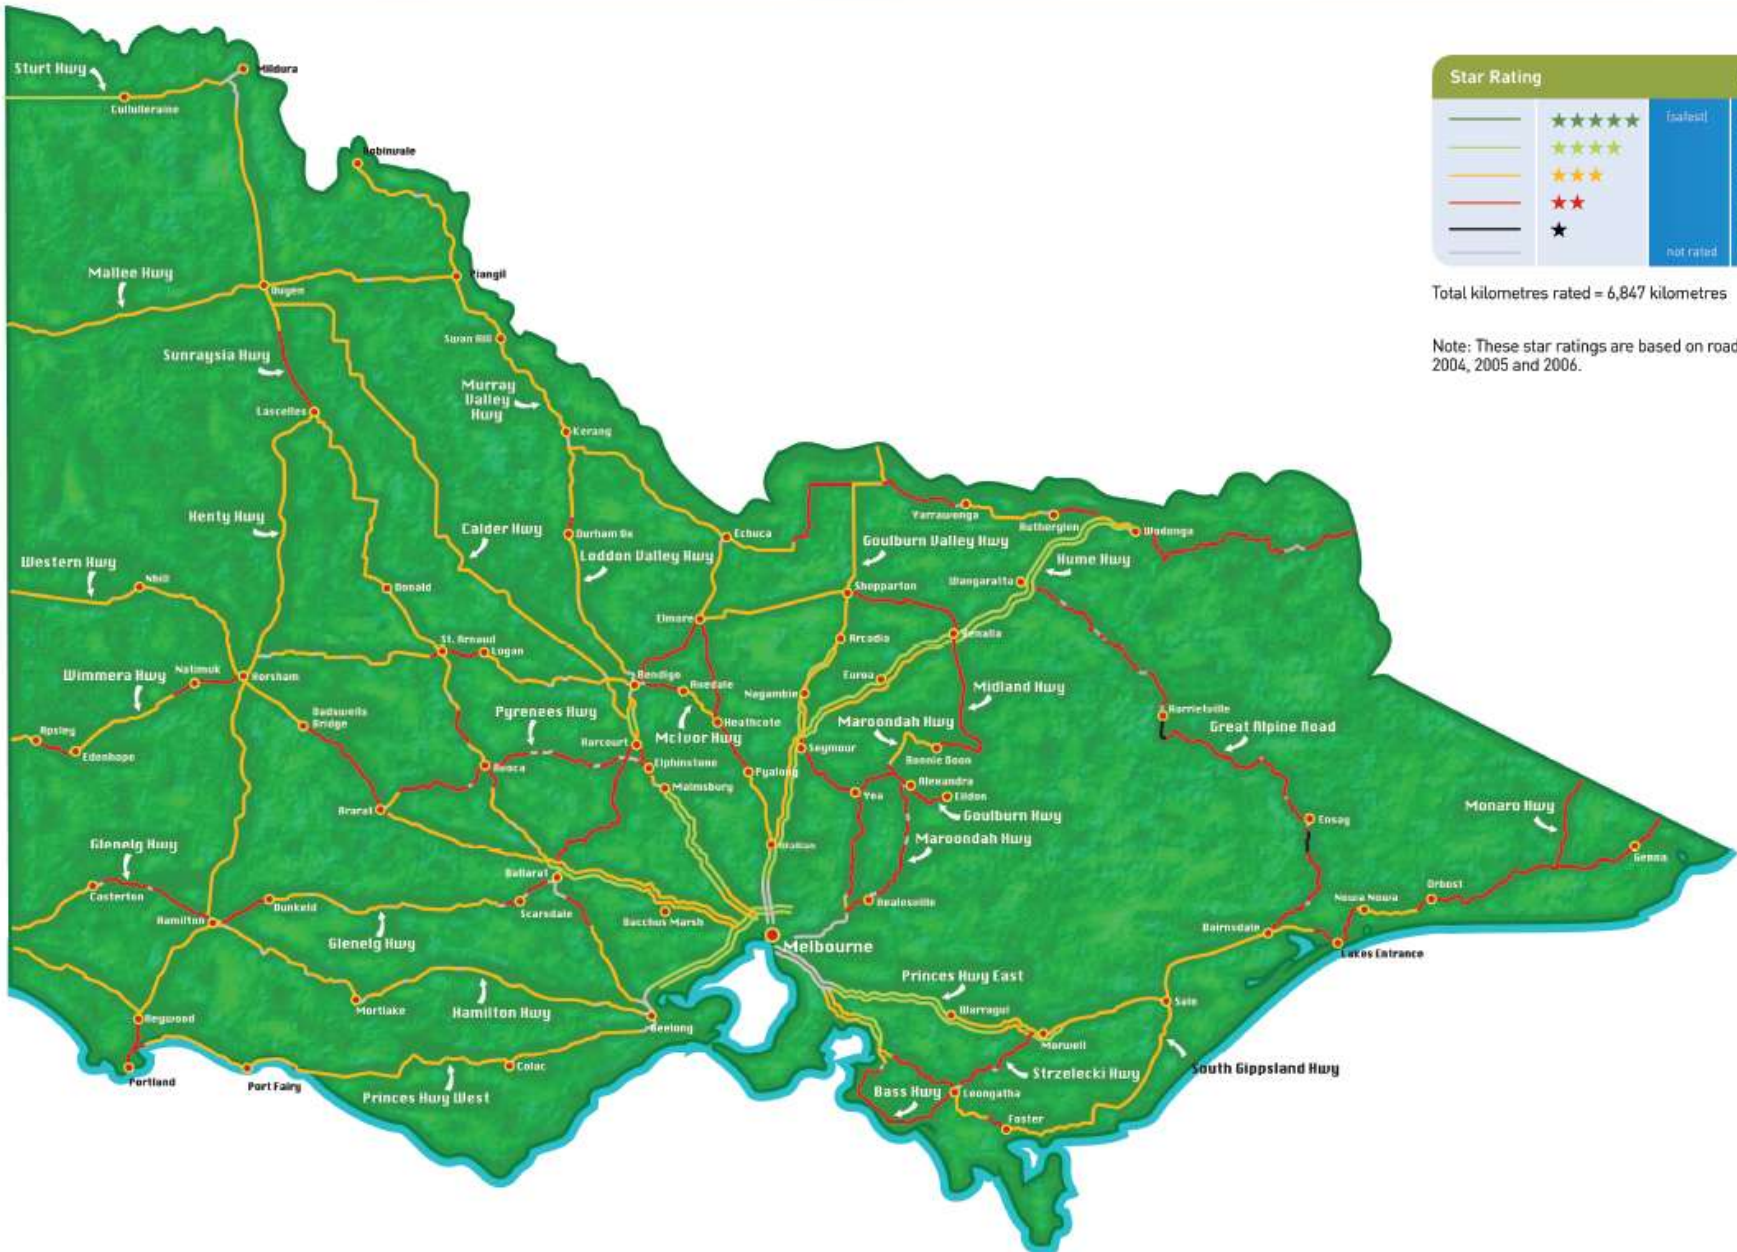

## AusLink National Network

*****	0%
****	42%
***	55%
**	3%
*	0%

# star ratings for Victoria's country highways

Star Rating		Percentage
★★★★★	(highest)	0%
★★★★☆		15%
★★★☆☆		57%
★★☆☆☆		27.5%
★☆☆☆☆		0.5%
not rated	(lowest or below 10km/h)	

Total kilometres rated = 6,847 kilometres

Note: These star ratings are based on road data collected in 2004, 2005 and 2006.

## Who benefit?

- Road users:
  - raised awareness of risk
  - adapt driving and better understand need for laws
  - want to see safer roads
- Governments, authorities, planners and engineers:
  - overall performance of a particular road can be compared to others
  - rising road standards can be tracked
  - assisting in decision-making about road investments
  - makes the business case for road improvements

# The AusRAP project (2006)

- focused on AusLink road network (20,000 km)
- required sourcing of local video data from SRAs
- manually rated
- issue with calibration of images
- quality control important due to subjective nature of rating

# Rating form

# Improving objectivity – horizontal alignment

- indicates whether road is straight or curved
- rating relates to the safe speed a vehicle can negotiate curve

> 120 km/h

100 < limit < 120  
km/h

70 < limit < 100  
km/h

< 70 km/h

# Improving objectivity – horizontal alignment

- subjectivity removed by using outputs from inertial system
- automated measure of curve speed

## Prevention is the best cure

- road safety remains a major public health problem in Australia and around the world
- safer roads **will** save lives
- visit [www.ausrap.org](http://www.ausrap.org) for more information and reports

## Other stuff (that may be of interest)

- SICK laser scanner

# Assets and hazards - location and identification

# Cool images

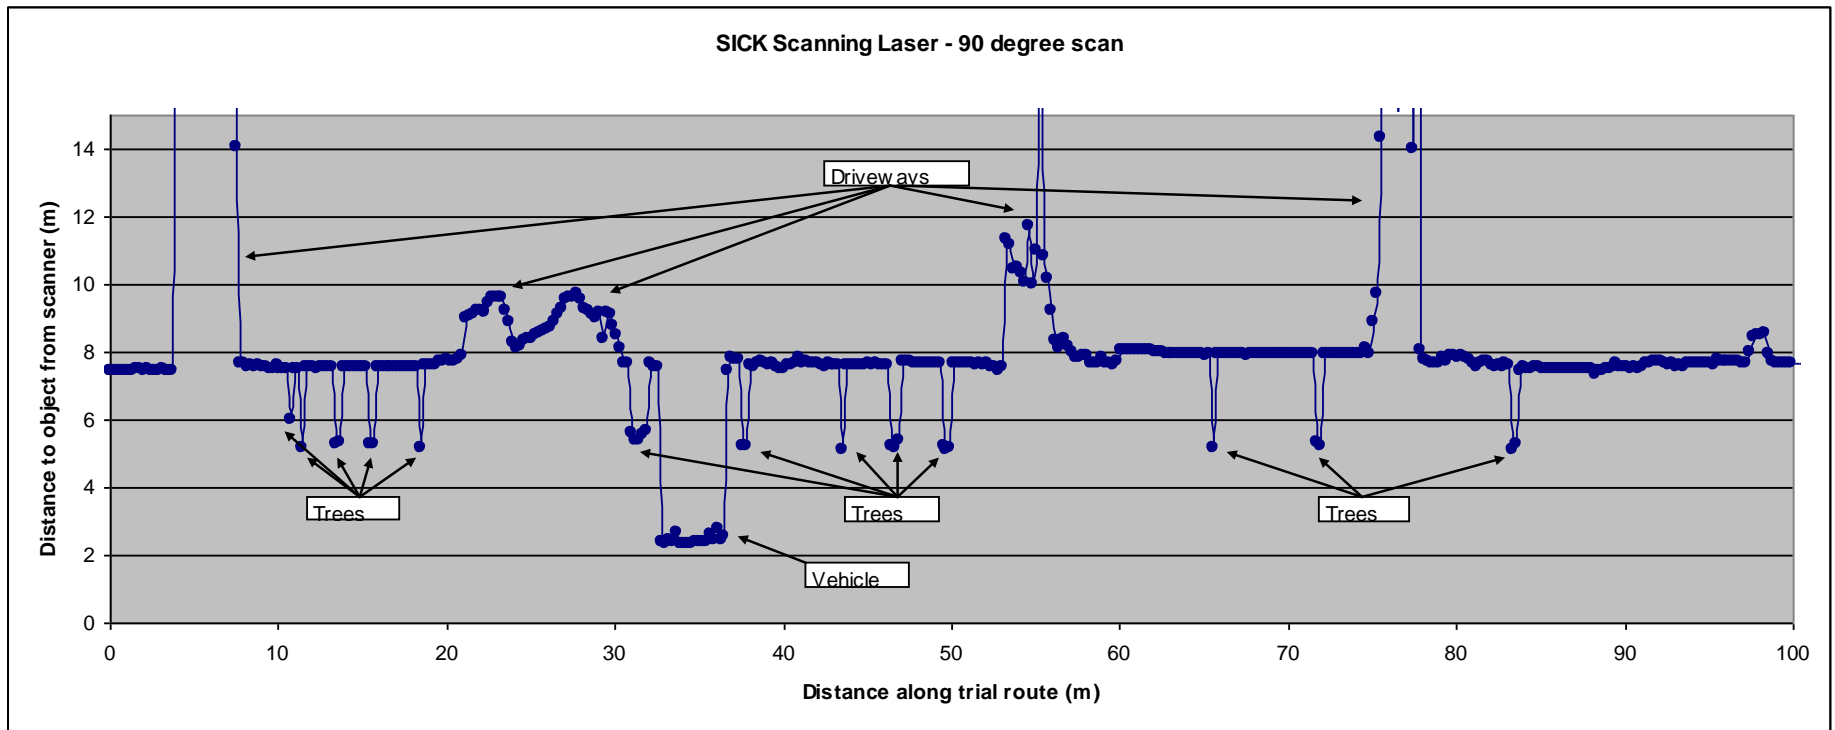

# Point cloud export

# Identifying features and hazards

## Other stuff (that may be of interest)

## iRAP project aims

- drive safety upgrading where large numbers are killed and seriously injured
- global methodology to generate effective and economic countermeasure programmes
- implement performance tracking methodologies for funding bodies to assess outcomes
- provide the training, manuals and web tools to build and sustain national capability
- visit [www.irap.net](http://www.irap.net) for more information and reports
